AutoCAD With Key

1. Go to File > Options. 2. Click on Projects & Files > File Type. 3. Under The Import filter, Click on Autocad. 4. Click on AutoCAD Current and choose the path where you installed Autocad. For example I install it in my desktop C:\Program Files\Autodesk\AutoCAD. For the Activation you need to setup a connection to your server. Go to Edit > Preferences > Connection. Choose connection type using your activation key. If you don't have the activation key you can get one from your Autodesk. For the "The Import filter" you need to know what type of files you have. If you have only *.dwg files and nothing else then you will need to chose this one. If you have some *.dwg and some other file types like *.ase, *.wmf or *.dxf, you should choose this one. If you have some other filetypes than *.dwg you should chose this one. If you don't know what type of files you have and you don't know how to tell what type of files you have, you should choose this one. Use the AutoCAD Current, select all the DWG and LAYOUT files. (if you don't have any other filetype than DWG and LAYOUT you don't need to select them. but then don't select other filetypes you have). Then you can select the sub-folder you installed the Autocad in. Then click the Add Files button. Choose the filetypes you want to import. Double click one of the files to open it. You can also import them all into AutoCAD at once by using the GUI. Go to File > Open AutoCAD Current. Choose the folder you want to import the files. The import dialog will open. Click on the Files tab. Click on the Import button. Then choose the filetypes you want to import. And then click on the Browse button to select the files you want to import.
