According to the software publisher, "Autodesk AutoCAD is the fastest-growing business platform in the history of its industry." As of January 2020, Autodesk reported AutoCAD sales of more than 200 million units, and an installed base of more than 8.1 million users. History Autodesk was founded in 1982 by Max Dunn, Bill Van Auken, Steven Sinofsky, and William Wehrle, who had worked together at various jobs in graphic design. The original Autodesk offices were in the Digital Equipment Corporation (DEC) building in Milpitas, California, and the first staff consisted of three people: Dunn, Sinofsky and Wehrle. Bill Van Auken, Dunn's friend, had taught him to use a calculator. When he showed Dunn the product, Max decided to sell it for Van Auken to sell at a coffee shop. It became the first product sold by Autodesk, and they started taking orders. Autodesk went public on NASDAQ in 1986. In 1987, Autodesk designed, developed, and produced AutoCAD, which made the company profitable within two years. Autodesk's first office was located at 1211 Lake Drive in Palo Alto, California. In July 1987, Autodesk bought out the Computer Division of HP and gained access to the HP Laserjet II ink-jet printing technology. The company moved to a larger office and later acquired a facility in San Diego that allowed it to easily expand in support of its growing customer base. In 1993, Autodesk moved its U.S. headquarters to San Rafael, California. In 1998, Autodesk acquired FAST Corporation, an animation software development company founded in 1972 in San Francisco, and Autodesk purchased the VectorWorks division of Macromedia, then a rapidly growing software development firm. In June 2004, Autodesk acquired the Silicon Graphics Software Division and three subsidiaries of SAIC for $360 million. In October 2004, Autodesk acquired the VectorWorks division of Macromedia, a developer of 3D modeling software, for $2.6 billion. In April 2008, Autodesk acquired the Scientific Creo product line from the Dassault Systemes Group, parent company of 3D content creator 3DS. References Category:CAD softwareQ: Difference between "instantiateActivity()" and "launchActivity()" methods in android What is the difference between the following two methods? Which one is best to use? private static final String WEB_VIEW_TAG = "com.example.MainActivity"; // Option 1: launch an Activity using an explicit Intent public void showWebView() { Intent intent = new Intent(Intent.ACTION_VIEW, Uri.parse("")); startActivity(intent); } // Option 2: Instantiate a new activity via its component name public void showWebView() { Intent webViewIntent = new Intent(Intent.ACTION_VIEW); webViewIntent.setComponent(new ComponentName(MainActivity.WEB_VIEW_TAG, MainActivity.class.getName())); startActivity(webViewIntent); } A: launchActivity() will automatically create the Activity instance if there isn't one already created for the Context's package name and thus you won't have to create it explicitly. On the other hand, you can pass any Intent object to it which will launch any Activity instance for the context. startActivity(intent) on the other hand just does a more involved Intent.putExtra("EXTRA_NAME", "value"); which creates a new Intent, but you have to pass it all the information yourself. Installation: So you've decided to buy a car. You've got yourself all set up with the car, but the car needs a pretty big load before it will start up. It's going to need a lot of gas, a lot of oil, lots of coolant, and a lot of oil filters. If you don't have the time to do all that, there is a car that can do all that for you. It's called the car wash. You install this car wash machine in your garage, run it, and wait for that massive dirty car
