Using the options to the right of the command allows the user to define the position and angle of the rectangle. The rectangular shape can be closed either by clicking the vertex of the shape, or by using the Zoom tool to move the shape, then pressing Ctrl+Z. By default, the shape is drawn with the origin at the geometric center of the drawing area. If the drawing area is not centered, this can be changed by first selecting Center Shape to Center or Center Location to Center. Directional arrow tool The directional arrow tool, found at the top of the Home toolbar, provides a pointing arrow similar to the mouse pointer.
