KEYMACRO is a utility program that enables users to perform macros for Excel, Word and PowerPoint. The original purpose of this software is to make macros easier to use, but we're here to focus on its ability to generate CD or DVD disc with different contents. The software offers you the option to create a disc with macros or without them. While the former is more commonly used, we opted for the latter, since it's more convenient to create a disc with no macros and then send it to the user. To create such a disc, the user needs to select a folder in which to save the disc. Subsequently, it is important to note that the data of the existing folder will be deleted, so it's wise to save a backup of the data first. In order to add macros, the user needs to select the destination folder, perform a search for the target macro file and then click on 'Start'. You can create and run the same macro over and over again. After the finished macro has been saved, it can be copied to the destination folder by right-clicking on it, clicking on 'Copy', and then selecting the destination folder. The same process can be followed to copy the project folder to the destination folder. In addition to macros, the software can save other files of users' choice. Furthermore, the original purpose of KEYMACRO is that it will save macros in a database, allowing it to save up to 25 macros in a single Excel file. However, if you don't want to use this option, then you'll need to enter the macro data manually, which is a bit of a problem. You can right-click on the active cell in Excel and then select 'Copy'. A similar process can be followed in PowerPoint, but the available options are a bit limited in this application. Nero InfoTool is a reliable application aiming to provide information about your system, including hardware, drivers, inserted discs and installed software. Although the software market does not fall short of such utilities, Nero InfoTool benefits from a feature that is rarely to be seen in similar software. It's the application's ability to fetch an extremely detailed report regarding the CD / DVD disc drives that impressed us the most, even though we can't complain about its other capabilities, for that matter. However, being produced by Nero, it's to be expected that the attention falls on disc information rather than other hardware components. Proof to this is the fact that upon a short analysis, the first reports to be delivered are those related to the inserted CD / DVD. These include details about the disc type, firmware version, buffer size, serial number, read/write speed, supported read/write features, write modes, as well as information related to DVD discs, including vendor and region control and code. In addition to these, the application also gathers data about existing tracks, blank capacity, manufacturer ID, disc status, title, date, and publisher. Subsequently, Nero InfoTool will retrieve basic information about the computer hardware (system and peripherals), installed drivers and software, as well as an extensive report similar to Windows' Device Manager. All of these details may be saved to a text file or sent directly to the system printer for later use. You can also hit the 'Refresh' button if you insert another disc or plug an external device, in order to update the reports. On an ending note, Nero InfoTool is a decent choice that fetches information about the most important sections of your system. However, the most impressive report is related to the CD / DVD disc configuration and contents. "This is the feature we have looked forward to the most and it delivers exactly what it promises. We are using the program as a DVD/CD drive manager and it works just great." - TechWare User Review "This program is very complete and easy to use" - by Rick Beckler "I believe this program has a potential to become a must-have tool for Linux users. It really is well done and functions great." - by Dan D. Wolfe "Nero InfoTool is an essential tool for Windows users. It can help diagnose a large variety of problems. It also displays information

I remember when I was younger I used to solve the age-old problem by simply using a Click to Run field. But, the hard drive was much faster back then and I would avoid being disconnected from the Internet. Fortunately, the world is a much better place now with an exchangeable method that not only works, but is also supported by the operating system and browsers. This method is an external application that can be started by the Windows Task Scheduler or Microsoft's Office Task Scheduler. This way the problem that used to be met with a "Click to Run" field, is now a bit more "solved" with "exchangeable" methods. At this point you might be asking, "how would you use that?" As you might have noticed, the
