You should always take an original photograph instead of relying on a stock photograph, unless you have a reason to take a stock image. If you do choose to use a stock photo, make sure you find out if your image will be used in a commercial context, and double-check the content and any potential copyright issues. Mastering Retouching Although some people who really love a particular face are crazy enough to try to paint it on, the majority of people rely on Photoshop to touch up photos before they're exposed in print or on the Internet. First, you need to know how to remove unwanted facial features, such as shadows, wrinkles, blemishes, and unwanted hair. After that, you need to understand how to use Photoshop's layer-based editing to create and alter what's left. Choosing an editing application In Photoshop, you can work on a single image at a time or work on multiple images at once. You also have the option to view a web page in Photoshop. You can move tools back and forth between tool palettes with the use of the Move tool. Photoshop is very handy for retouching, so if you've never retouched a photo, it's a good idea to get acquainted with it. To make changes to multiple images at once, you have two choices: Create a Photoshop Elements Organizer set, as in PhotoProjector or the Adobe Photoshop Elements Organizer, as in PhotoProjector, or you can open multiple documents in Photoshop. See the "Creating an Organizer," sidebar later in this chapter, for more information on Organizers. Removing unwanted features Photoshop has several tools for removing unwanted objects, unwanted colors, and unwanted changes. You'll find all these tools in the Remove tool palette, as shown in Figure 12-6. **Figure 12-6:** Use the tools in the Remove palette to remove unwanted features from a photo. After you understand what each tool does, you can start to control what you're removing, such as the color in Figure 12-7. Notice that changing the Deselect
