study of the cell cycle. The cell cycle of the slime mold Dictyostelium discoideum is a model system that provides an excellent starting point for investigating the dynamics of the eukaryotic cell cycle. This review examines the recent literature on the use of parallel architecture for the study of cell cycle kinetics. We discuss the advantages of this approach, and the range of problems which have been addressed using this

method. We review recent work on how the data produced by parallel arrays can be re-analyzed, highlighting the use of parallel arrays as a tool for modeling cell cycle kinetics.A new robot-assisted minimally invasive technique for proximal gastrectomy with lymphadenectomy in early gastric cancer: pilot study of feasibility and safety.
