How can I host a font for viewers to use? I tried using the freeware @font-face generator but it's giving me a 404. A: @font-face has changed quite a bit since the last time I used it. I would not even try to use it now. What you need to do is to use a webfont server, for example Cezanne. It allows you to pick a font from any font source you want, including Google fonts. The service is free and you can use it for up to 10 fonts. Glioblastoma multiforme: prognostic factors and current treatment trends. To identify the impact of demographic, clinical, histologic, and treatment factors on survival in patients with newly diagnosed glioblastoma

multiforme (GBM) and to discuss the impact of postoperative radiotherapy (PORT) on patient survival. We reviewed the data of all consecutive newly diagnosed GBM patients who were treated at the Cleveland Clinic from 1981 to 1999. The impact of various factors on survival was evaluated using univariate and multivariate analyses. We also evaluated the impact of PORT in the subset of patients who were treated with PORT. Eighty-eight patients with GBM were treated at the Cleveland Clinic between 1981 and 1999. The median age of the patients was 55 years (range, 22-83 years), and males comprised 52% of the patients. Median follow-up was 17 months (range, 0-258 months). The median survival was 12 months, and the 1- and 2-year survival rates were 23% and 10%, respectively. Multivariate

analysis revealed that age, performance status (PS), and the use of PORT were associated with improved survival. In the subset of patients who underwent PORT, there was no improvement in survival when PORT was used. Advanced age, poor PS, and the absence of PORT were associated with worse survival in our series. PORT was associated with improved survival, but when PORT was not used, there was no difference in 77a5ca646e
