It is represented in the form of a table, where all of the elements that have been synthesized and discovered are listed, giving a good overview of the current state of science and the areas that need to be explored. While originally it was used as a tool for classifying elements based on their chemical and physical properties, it is also used as a motivational tool for students, teachers and researchers to find the elements that they have not yet been familiar with. In an online app, the period table was adapted to include more recent elements. We
