* _For Mac users,_ Adobe Photoshop Elements (; \$99) offers a streamlined, inexpensive version of Photoshop, with many of the same features as Photoshop. * _For Windows users,_ both Photoshop and its rival, Photoshop Elements, are available as both stand-alone programs and as part of the Photoshop Creative Suite (). Photoshop is the more advanced version of the pair, but Photoshop Elements is a very capable program for someone interested in less photorealistic editing or editing that involves a lot of nondrawing skills, such as managing layers, layers, layers, layers, layers, layers, layers, layers. The following sections give you a brief overview of Photoshop's various tools. ## Correcting and enhancing The most common type of image editing in Photoshop is something called _correction and enhancement_ (often referred to as _editing_), where you use tools such as filters, adjustment layers, or brush tools to either correct errors you've made in the image or enhance the image's overall quality. In this section, we explain the basics of how to use Photoshop's tools in a corrective and enhancing way. If you are already comfortable with Photoshop, this section can just be a refresher. ## Choosing a type of enhancement Certain types of Photoshop corrections and enhancements are the same, regardless of whether you use a tool or an adjustment layer. If you wish to change the brightness or color of an image, you do not need to make separate layers for both of these tasks. You can use the same layer to simultaneously apply both an adjustment and a filter that change the brightness or color. (_**Note:**_ As mentioned in the preceding section, there are some Photoshop tools that can apply both adjustments and filters — again, however, you can apply these two types of tools to the same layer.) Two types of adjustments are the most common: * **Color:** This type of correction and enhancement often applies something called an _adjustment layer_ to color, which is discussed in the next section. * **Brightness and contrast:** This type of correction and enhancement applies something called a _filter._ You can apply filters to specific color ranges or the entire image to change the overall brightness and contrast. Additionally, you can apply both color and

Q: How to reverse / select paths in an Illustrator object in order I have an object with a path: ...and I want to reverse the selection in order to change all the curves to curves of the opposite sign: ...but if I try to select and reverse (Cmd-Option-Alt) then the inverted object is created: ...and I want to create the original figure, not the inverted. How can I reverse the selection in order to create the original path? A: Unfortunately, there is no invert command that will work for a path. However, you can do this without going through the menu path finder at all by using the Selection to Path command (found in the Edit menu): Once you have a closed path, you can right-click on the path and choose Convert to Shape from Path. As I said in a comment, you can select the entire shape and hit Cmd/Ctrl+I to invert the path, then use Shape > Make with Path to make a copy: Q: Apache Maven Agent clone is not working as expected In my build script I have this maven command to generate war file, and then generate enterprise app and deploy that file in tomcat. I call these commands as a separate steps as follows mvn clean deploy WAR:war mvn clean deploy EAR:ear This works fine, but I wanted to separate these two commands, so I added second maven command as mvn clean deploy WAR:war EAR:ear Now the problem is, first time when WAR:war maven command runs, it works as expected, but when the second maven command is executed, it throws error as [INFO] ----- [INFO] BUILD FAILURE [INFO] ----- [INFO] Total time: 0.533 s [INFO] Finished at: 2018-03-29T23:24:13+05:30 [INFO] Final Memory: 17M/226M [INFO] ----- [ERROR] Failed to execute goal org.apache.maven.plugins:maven-compiler-plugin:3.3:compile (default-compile) on project midprice-merchant-shoppingcart: Fatal error compiling: invalid target release: 1.4 -> [Help 1] [ERROR]

Q: Let $f(x)=\frac{1}{x}$ and let $g(x)$ be a continuous function defined on \mathbb{R} such that $f(x)-f(y)=g(x-y)$ for all $x,y\in\mathbb{R}$ Let $f(x)=\frac{1}{x}$ and let $g(x)$ be a continuous function defined on \mathbb{R} such that $f(x)-f(y)=g(x-y)$ for all $x,y\in\mathbb{R}$ I want to show that $g(x)=\frac{1}{x^2}$ is continuous in \mathbb{R} . I actually thought about using ϵ - δ definition of continuity: We want to find a $\delta>0$ (small enough) such that $f(x)-f(y)>\frac{1}{2}$ for all $x,y \in (x-\delta,x+\delta)$. Since $f(x)=\frac{1}{x}$ this is equivalent to: $x-\delta < 0$ such that $|x-\delta| < 0$ in the definition of continuity. I tried to go one step further and get to this $x-\delta$
