Open a new model in Autocad. Create a shape of the floor like a rectangular shape like this. Save the file as ctp. Open that file and save it as rect.ai. Open the file rect.ai and activate it. Save it as rect. Delete the floor. Delete the rect.ai. How to convert the rectangle into a box A: If you are really looking to create a box from a rectangle, the following will do. The issue with what you have done is that your floor has been created as a collection of individual parts (left,right,top,bottom,back,front). It also creates an extra top and bottom left parts. Select all of the front and top-right, bottom-right, and bottom-left parts. Right click > Group. Make all of the front and back parts top and bottom of the box. Make the right parts top and bottom of the box. Join the front and back and top and bottom. Extrude the right and bottom parts to create the ends of the box. If you want to be able to change the faces afterwards (e.g. change the bottom to be a full floor, or change the top to be an empty space for a window etc) then the following will work. It will create the top and bottom faces that you will be able to edit afterwards. Select the top and bottom parts and the right and left parts. Right click > Group. Make all of the top and bottom parts sides of the box. Make all of the left and right parts sides of the box. Join the top and bottom. Extrude the top and bottom parts to create the ends of the box. After you have done this you can apply a texture to the top and bottom faces using the following: Select the top and bottom parts. Right click > Apply texture > Add texture. Choose an image, and adjust the position and rotation. F.2d 1071 (7th Cir.1986); Tillett v.
