Caterpillar factory password generator, software for cats truck engine.Q: Add ToolTip to a control in C# with automation (Application.Information) I need to add a ToolTip to a custom control in my WPF application. I used this one (Application.Information) and it works very well, but for one thing : I can't add a ToolTip to the exact element I want. So far I can place my control on my MainMenu in another Window in my WPF application and make it's title. I can access it and modify it's properties like color and size. But I want to make it a ToolTip, can someone help me? Thanks A: Question in the title is answered in the post, I guess it's a question of the way your control on the MainMenu is set up, only the control added to the main menu as well. public bool IsExist() { if (Top.Title == "Application") return true; return false; } private void AddToMainMenuToolTip(TextBox Occ13bf012
