Your HostGator account comes with a free space of 4GB for your website, but if you want to grow your website further, you can increase the size of your account. Using your own domain is one of the most common options for hosting your website, but if you are looking for a free hosting provider, you can't use your own domain name and you're also forced to leave it in the hands of third-party domain registrars. With Hepsia CPanel, your customers will be able to have their websites automatically pointed at your new location for free. Setting up your own FTP server is not the simplest task, especially for people who are not into this kind of server management. But Cesar FTP can help you with this. One of the main reasons why this is the case is that this is not a program that you would need to config every single detail, because it's an FTP server builder that allows you to create everything in a very easy and intuitive way. This is not a program that you would need to config everything in details, like using a FTP client. Instead, you will be asked to choose the location of the installation, the username and the password, the network's type and the number of allowed users. It also features a customizable interface that allows you to freely choose the available features of the server and configure them how you want. The interface also allows you to upload FTP configuration files and set the directory structure you want the server to use. The directory structure usually consists of sub-directories that store your uploads and downloads. Cesar FTP also provides you with a client that will help you manage your files and that will let you upload and download them over the web.
