Satyagraha 2 Satyagraha 3 Hindi : Few more days and it will take me to India, One more India. Please don't move away and remember me your fans who are hungry for India from Australia. Please keep me up to date with upcoming India, including Mumbai, Delhi, Bangalore, Chennai, Pune and all others. Please, I want to reach India, finish the stuffs..Q: JavaFx : Vertically scaled image Is there any way we can horizontally or vertically scale an image in javaFx? I have tried using scaleX and scaleY but it's not working. A: Try ImageView image = new ImageView(new Image(...)); image.setScaleX(2.0); image.setScaleY(2.0); image.setAlignment(Pos.CENTER); A: You can always specify the scale in the Image constructor. Image image = new Image(imageURL, availableWidth, availableHeight, false, true); AvailableWidth and AvailableHeight are factors for aspect ratio and force scaling. A: This is a normal question to ask and I am sure it is already answered in many other ways. But I just want to point out a simple way to do this. In my opinion the most elegant way of doing this is to use an ImageView and make it scale. public class ScaleImageView extends ImageView { private double scale = 1.0; private double imageWidth, imageHeight; public ScaleImageView(String imagePath, double imageWidth, double imageHeight, boolean fitImage) { super(imagePath, null); setFitHeight(fitImage); setFitWidth(fitImage); this.imageWidth = imageWidth; this.imageHeight = imageHeight; } @Override protected double getScaleX() { return scale; } @Override protected double getScaleY() { return scale; } }
