Save Download Free Download Games Legend of Queen Opala Golden Edition. [2] All Golden Edition of [2] Condition. [3] Download Legend Of Queen Opala X Rebirth: episode 1, episode 2. but it is necessary to allow the game to save during the completion.Q: Subtracting a Date using JavaScript I am trying to generate a running total on a formated date. I'm not very familiar with javascript, but from what I've seen, I need to subtract one date from the other. Here is the code I have so far: var inc = document.getElementById('incMileage'); var curr = document.getElementById('currMileage'); var cal1 = document.getElementById('calendar1'); var cal2 = document.getElementById('calendar2'); var date1 = curr.value; var date2 = cal1.value; var date3 = cal2.value; var d1 = new Date(date1); var d2 = new Date(date2); var d3 = new Date(date3); var seconds1 = d1.getSeconds(); var seconds2 = d2.getSeconds(); var seconds3 = d3.getSeconds(); inc.innerHTML = seconds1 - seconds3; I need to subtract the date in the element cal2 from the date in the element cal1, which should be of type Date. I want to store the time portion in seconds and then subtract that number from the minutes and seconds of the current time. For example, today is March 20, 2015 at 10:40AM EST. The date in the element cal2 is yesterday, March 19, 2015 at 8:00PM EST. How do I subtract the time portion of d3 from d1? My result should look something like 2:37. I can manipulate the result using the display: 0cc13bf012
