ABSTRACT: The article offers a social and political analysis of the antiterrorist campaign in Uzbekistan. The author suggests that one reason for the apparent lack of public support for the antiterrorist campaign is that local public opinion is shaped by the need to balance a range of competing and competing interests. The political conundrum is highlighted in the introduction: how to maintain stability in a conservative society with growing radicalism and violent resistance in the turbulent, postcommunist environment. Comprised of a broad discussion of the situation, the author draws on a recent personal experience of Uzbekistan to explore the antiterrorist campaign. Siberian oil catastrophe Northern Japan. THE COLD WAR: EXPOSED! By George Carlin By the end of the 1950's the Cold War between America and Russia, had extended its grip on our lives. Americans learned that we were at war with Russia. One of the most important aspects of the Cold War that is forgotten, was how much petroleum is used as a weapon of war.

The Russians and Americans learned to develop their nuclear arsenals in secret, in order to maintain technological superiority. And in 1959 the U.S.A. tested the first hydrogen bomb, a bomb so powerful it dwarfs all nuclear weapons. The atmospheric testing of this bomb, nicknamed the Super Mushroom, proved to be a great success as the Soviets were completely blown off the airwaves with the fear and trembling of what was about to happen. The U.S.A. had its first test of the hydrogen bomb, the Soviet Union had their first test of a weapon designed to shield its cities from nuclear attack. In that first test the Soviets had the first anti-ballistic missile. It was a great success, as it allowed the Soviets to seek out and destroy the testing devices of the U.S.A., the B-52.

The Soviets also learned that it was not safe to launch their offensive nuclear weapons. The B-52 was designed to bomb the Soviet Union, now it was a nuclear surface to air weapon. The U.S.A. immediately took a very close look at the B-52, they wanted to get one just as fast as the Russians could, and they made their design. With the first successful test of a B-52, America also had the first supersonic jet fighter as well. The Soviets had their first success with an anti-ballistic missile when they shot down a target of the Washington Monument. U.S.A. was furious, and it took just thirty days to turn the B-52 into the B-52H.

The U.S.A. completed its first supersonic jet as well, the F-100 Super Sabre. Russia got one as well, and for a short time, they had the F-105. The two countries were using their weapons of mass destruction on each other, but once again America's use of petroleum had its effect on the Cold War. In 1961, the U.S.A. created an intelligence unit within the army to plan and run secret

war games. The unit would be capable of making a well coordinated plan to invade Russia. The unit was
