No. 866,626, filed July 10, 1986, now U.S. Pat. No. 4,677,675 entitled CABLE TIED WIRE RIG AND SCREW ASSEMBLY APPARATUS, which has the same inventors, John S. Rasmussen and Dennis D. Vreeke, and the same assignee, the same title, and the same filing date as this application. 1. Field of the Invention This invention relates to power line power tools and more particularly to a power line tool which simultaneously effects the installation of electrical wires using a power line and then tying off the wires using a power line. 2. Description of the Prior Art It is common to place electrical wires between poles and between utility boxes or other supports. Typically, a utility company employee will place the electrical wires in holes in the poles and boxes and thereafter cover these openings with an electrical conduit. However, because of the inherent time involved in installing electrical wires, it is common to bring along an electrician to place the wires. Since an electrician is usually not around, it is common to use a power line tool to assist in the installation of the wires. In order to be able to use a power line tool, it is common to first drive a nail into the pole or box to which the wires are to be attached and then to attach a wire between the power line tool and the nail.

## **What's New in the AutoCAD?**

You no longer need to export a drawing to a file first. Print two or more source files, then connect to another drawing, and the rest of your drawing is automatically incorporated. Transfer a view of a complex, multi-spatial drawing into a single view. Markup Assist 3D now allows you to add 3D annotations to drawings and transform them into 3D surface models. (video: 1:32 min.) Automatic Export and Import with Partners in Electronic Collaboration: Now you can quickly send drawings to a partner, and when your partner sends you feedback or a drawing, you can incorporate it into your drawing. Using AutoCAD Wizards, you can build a drawing that creates workpieces or other drawings, based on a template you select. If you later need to update your drawing, you can easily do so with the updated template. You can now drag the Move Tool between drawings. Now you can easily move drawings, even between different libraries. In Classroom 1, you can now hold down the Shift key while using the Moving Tool to move to the next grid reference. This lets you move in between grids, without overlapping the next grid or working on the original grid. In Classroom 2, when you work with a multi-spatial drawing, you can activate the Direct 3D workspace to build and view a 3D model using the AutoCAD DesignCenter. You can now download and open files and even create new drawings from multiple places. Multiple displays now work together when you add a display to the Dynamic Display Group. You can now close drawings and return to a previous workspace. In Classroom 3, you can open different revisions of the same drawing and view them side by side. You can also open additional drawings for comparison. You can now share your drawing with mobile devices, so you can view, edit,

and annotate your drawings on the go. You can now directly open three-dimensional (3D) models in AutoCAD. You can now annotate objects in 3D using the Pencil Tool. You can now select a range of objects, even on the same layer. You can now organize layers in the Layer Manager by any of the properties you set for them. You can now select the Start Markup tab, rather than the Rot
