After using the command signtool.exe sign /f "C:\Users\you\Desktop\you.cad" /p "yourPassword" /t "yourTimestamp"

"C:\Users\you\Desktop\you.cad" you will get a result that look like this: Object 1: "your Timestamp" "yourPassword" {pass: SignatureData} Object 2: "C:\Users\you\Desktop\you.cad" {sec: SignatureData} If you don't have this file, you will need to download it from Autocad website. You can ignore the Object2 for now. Create a bat file with the following echo off signtool.exe sign /f "C:\Users\you\Desktop\you.cad" /p "yourPassword" /t "yourTimestamp"

I also do a lot of testing on real devices (iPad). I was wondering what I could do to improve the quality of the simulator? Things like accuracy of the touch responses. Do the simulator the same processor that a real device runs? A: Read up on Instruments and watch the video tutorials on how to use it. It's really very simple. This is the best video I found about it. But the entire "tutorial" is very simple and is just what you would need to get started.
