AutoCAD Registration Code Download

AutoCAD Activation Code has its roots in the drawing board computer of the 1970s. Designed by Charles "Chuck" Adams, the first AutoCAD Crack Keygen was released in 1983 and was the first CAD application to run on a microcomputer with internal graphics capabilities. The desktop version was marketed for \$1695 (about US\$4,000 in 2009). The first AutoCAD only ran on the Apple II family of computers. In the 1980s, ESR Systems, a startup company in Dallas, Texas, reworked the design into a version that ran on the Apple III family of computers. In 1988, ESR released the first version that ran on the Z/40, an IBM computer with a 40 MHz Zilog Z-80 processor. AutoCAD runs on Microsoft Windows and is available for Apple Macintosh computers and Microsoft Windows-based personal computers (PCs). It is available in desktop and mobile versions, as well as a web-based app. The cost for the desktop version is \$3,600 (about US\$10,000 in 2009), and it includes a two-year subscription to Autodesk's other software. The mobile app is available for the iPhone, iPad, Android and Windows phones, and it costs \$299 (about US\$895 in 2009). The web app is free and allows users to access the desktop version. [1] In 2013, Apple acquired the rights to sell and market AutoCAD for the Mac platform and released AutoCAD for Mac in August 2013. The software is available as a stand-alone app for \$399 (about US\$1,095 in 2009). [2] This article describes AutoCAD's history and features.

3.1 History of AutoCAD

AutoCAD was originally a stand-alone software application called AutoCAD LT. AutoCAD LT was a rewrite of AutoCAD for the Apple II family of computers. In the late 1980s, ESR Systems introduced the first version of AutoCAD that ran on the Z/40, an IBM computer with a 40 MHz Z-80 processor. ESR also released a version that ran on the Z/50, another Z-series IBM computer, but it was not as successful as the Z/40 version. In the late 1980s, ESR changed the name of the software from AutoCAD to AutoCAD LT and it became the de facto standard for the Apple II family of computers.

Research The use of parametric solid modelling was investigated in the early 1980s as part of the Laguna project. Many ideas were conceived and evaluated, but the project was abandoned after several years. In 1989, an architecture for a "tool-independent" parametric 3D CAD was conceptualised. These ideas were picked up and developed in the late 1990s by a group of University of Melbourne researchers, led by Professor Michael Heffernan and Dr Brian Landman. In 1992, the ACIS project began. This research included the development of a distributed collaborative parametric 3D CAD model, along with analysis of its performance and the various components involved. It also involved the development of the Parametric Composition Protocol (or PCP) which aims to allow direct interchange of parametric data between disparate CAD applications. ACIS has been discontinued in the early 21st century. In 1995, the Metaworks project was formed to explore further the idea of a distributed, collaborative parametric CAD model. In this project a large part of the actual design software was produced by a distributed collaborative team of students across Australia and Europe. The development of the Metaworks project also led to the development of the Metaworks CAD model, which is also distributed and collaborative. In 1998, the PhaseModel project was formed, also known as the Visible History project. The project was jointly funded by the Australian Research Council and the Victorian Treasury. Its aim was to allow the study and analysis of the development of architectural design and construction projects in a distributed, collaborative fashion. The analysis of the PhaseModel project also led to the creation of the PhaseModel CAD model. In 2000, the University of Melbourne initiated the "Virtual Building" project, which has continued and expanded to form the Platform for Visualisation of building construction (or PVB). The PVB project has been very successful, both academically and commercially, both in Australia and abroad. In 2001, the GeoComp project was initiated by the Australian Building Revolution program. This project involved a number of Australian universities, including the University of Melbourne and The University of Adelaide. It was a collaboration of architects, mathematicians, geologists, engineers, computer scientists, surveyors, and software and graphics experts. GeoComp was funded by the Australian Research Council, the Victorian Treasury and three private companies. GeoComp resulted in the development of GCP, which became a commercial product for both Microsoft Windows and Mac operating systems. The GeoComp product continues to be
