How To Fix "Stopping and/or starting the services may. The MBR is a set of 64 bytes of data at the very start of the disk drive.. The MBR is located in the Master Boot Record, and contains a 16-bit label for the GPT. } } public static String toString(Path path) { try { return path.getCanonicalPath(); } catch (IOException x) { throw new RuntimeException(x); } } } } Q: How do I save each product and display their respective number I am stuck on an exercise at a past medicine exam for my year of internship. I have to write a program to enter 40 drug deliveries in my database. Each delivery contains the name of the medicine, the cost of the medicine and the quantity of delivery. I have to display each delivery and write the number of times they had been delivered. I have to start from scratch. My first problem is that my array is only large enough to put the first 20 deliveries, I do not know how to work around this problem and edit it so I can input all 40 deliveries. My second

problem is that I have not access to a workbench with any help of the professor. The professor has told me only to read the book and read questions, do exercises and write the program. The question is very restricted so I do not have any help at all from the professor. I am very tired and I could write a lot more but I do not think it would be useful to you since it is long. In case you have any questions feel free to ask, I will do my best to answer them. I am a year of internship and this was one of the exams at the end. I have searched for a solution over the internet but the only way that I found to implement a program to record the number of the deliveries was a for loop but it was just working for the second number. This
