Finding lost layers It's easy to lose track of layers in Photoshop. After all, the layers palette looks like a menu of all the tool options, and each tool automatically creates one or more layers — things get very messy very quickly. If you lose track of a layer or stack of layers, you can return them to view either by using the Organizer or the Trash can. Figure 4-1 shows the Organizer where you can see each of the currently open layers in this document. The layers palette includes buttons to add and delete layers.

FIGURE 4-1: The Organizer window enables you to quickly locate and close layers and undo changes you make to multiple layers. You can also search through the layers in your document by clicking in the Search field in the upper-left corner of the workspace.

Q: ExtJS: create store from JSON data received from the server I am working on creating store from JSON data received from server. I am a beginner for ExtJS. I am able to get JSON from the server, but I am not sure how to add the data into the JSONStore. This is what I am trying: Ext.define('example', { extend : 'Ext.data.Model', fields : [ {name: 'id', type: 'int'}, {name: 'first\_name', type:'string'}, {name: 'last\_name', type:'string'}, {name: 'last\_name1', type:'string'}, {name: 'gender', type:'string'}, {name: 'photo', type:'string'} ], idProperty: 'id' }); Ext.define('exampleStore', { extend: 'Ext.data.Store', model: 'example', autoLoad : true, remoteSort: true, proxy : { type : 'jsonp', url : "", reader: { type: 'json', root: 'users', totalProperty: 'total' } } }); var users = Ext.create('exampleStore'); users.load(); // what I want to do now // I want to get the JSON and add the data into JSONStore, how can I do that? Q: What is the difference between 是 and 在? I had this in a story for homework and I want to know what is the difference between the two A: 是 is the Japanese word "to be/existing" and may be translated "to be" 在 is the old Chinese word for "is, are, was, was". It can express the present tense or the past tense, or negative or positive. 在 can be used with the verb "to be" to get the meaning "to be/existing": 在{在在在在} (Noun + 在) = What is/are/was/were/is...? In this context, the meaning of 在 (is) is: "Is what?" It is true that in modern times, 在 is used to express "is, are, was, were/was" in the past tense. But this is only in colloquial (and possibly impolite) usage, and not in formal contexts. A: 在 means is/are/isn't, is plus a tense marker. It has no meaning by itself unless it is a verb in the particle 在{在在在} + 在 + time-marker Examples: 在{在在} - "is" 在{在} - "isn't" A: 在 is the "ie, it", "is" verb in Chinese. 在 is the "to be" verb in Japanese, which means the former one is another word just like 在, but it is more formal than 在. 1.
