If so, the following article will help you to learn the basic concepts of AutoCAD. There are two sides to AutoCAD: the user interface, and the commands. The user interface has buttons, menus, and dialogue boxes to do various tasks, and the commands are the operations you use to do these tasks. For example, a command is the equivalent of a keyboard shortcut, and can be assigned to a toolbar button, menu item, or dialogue box. In this article, we'll look at the user interface and the commands.

AutoCAD User Interface When we open AutoCAD, we're first presented with a blank screen, as shown below. The first screen you'll see is the Welcome Screen. The Welcome Screen shows a live flyout of the options you'll find in AutoCAD. On the Welcome Screen, you'll find the following options: CAD Units Display unit options Aldus Page Designer Page Design options Help and User Guides Enter the AutoCAD Help files Show model Properties Display model properties Close Display the AutoCAD Close dialog box You can right-click (CTRL+click) to enter into flyout menus and dialog boxes. Applying Line Style To start, we'll show you how to apply a line style to an existing line. First, select the line. Then, right-click and select "Apply Line Style", as shown below. * AutoCAD provides rich text editing and formatting capabilities, such as bold, underline, font formats, justification, alignment, and character size. **FIGURE 4.11 The main Edit menu in AutoCAD shows an editor menu that includes Insert and Cut. The Edit menu also contains a Design menu that includes several commands for creating and manipulating drawings. The Draw menu contains commands for drawing objects and arrows.** We'll see many of these commands as we study the operation of the application. In this first edition of the book, we'll focus on the editors and the tools and how you can use them to create and modify your drawings. The following sections describe some of the major editors and tools available in AutoCAD 2010. * * * ## **NOTE** There are additional options for customizing menus and other items in AutoCAD 2010. "We tried the market approach," Obama said. "And we tried the tax approach. And we tried the government approach. And what we have seen is not a sudden change. The change is that our parents were not as fortunate as our parents. The change is that our grandparents were not as fortunate as our grandparents. It is the law of progress. And the law of progress is that while we can do things to make it better, we're going to get pummeled, as Ronald Reagan once said, with misery and want." Hmm. So in other words, Obama didn't actually do the things he said he did. Let's look at how our economy has fared since he took office. Let's look at the real unemployment rate, not the government's phony unemployment rate, and let's look at the number of jobs added each month, not the number the White House flacks say we added. Ummm... Just 13.6 million jobs were created since President Obama was elected. When you count the jobs that were not reported as lost due to being underemployed or discouraged workers, the total is closer to 15 million. Which is to say, only about 10 million
