Software like CleanMyPC are great alternatives to malware.. for the new CleanMyPC 1.0.0.2107 Crack you can download CleanMy PC 1.1.0.2026 Crack Latest Version Free. Back to Top.. Download Version: CleanMyPC 1.10.5.2041. CleanMyPC Crack, Serial Key and Product Key.Q: Get the parent - loading the model in the background thread I have an "EventDisplay" like this: @Model.Events @**@ It is used for displaying events from an event repository in a grid. A class "EventRepository" holds a list of events and provides the Model of the Events to the view. I have a repository of repositories and have an instance of the EventRepository for each repository. Now i want to load the events in the background thread so the main thread can use the events. I need a pointer to the EventDisplay: foreach (var repository in repositories) { ... var view = ((IMyView)Application.Current.MainWindow); view.LoadView(repository.EventRepository); ... } I need the information about the EventRepository in order to create the GridView, so how can i get the EventDisplay instance? I'm not able to do this in my Application_AcvityStarted because the instance is not available at that point, and furthermore, it's event dispatcher thread (Metro style - Prism). Also, i don't want to use static variables for storing the model, because there can be multiple instances of the EventRepository. The only thing i could think of is
