electrochemical aptasensor. Novel one-pot, electrochemical aptasensors based on semiconductor quantum dots (QDs) with metal-organic framework (MOF) are described for the selective detection of long-chain aldehydes. The precursors for the in situ formation of MOF over functionalized QDs are dipodal linker molecules with a long alkyl spacer group. The QD-based electrochemical aptasensors show a high sensitivity for the specific detection of aldolase and aldehyde dehydrogenase activity, which allows the determination of ketones and aldehydes in biological samples.Job Location US-MA-Boston Category Role Type Experience Role Machine Learning Developer Type Full-Time Experience 2 to 4 years of c6a93da74d
